

# HXI

# Closed circuit cooling towers

# Key benefits

- No plume
- Superb water savings
- Cost saving

#### **HXI characteristics**

Combined flow, axial fan, induced draft Hybrid wet-dry cooling

#### **Capacity range**

up to 1290 kW

#### Maximum entering fluid temperature

82°C

#### **Typical applications**

- Medium to large HVAC and industrial applications
- Water saving requirements
- Plume reduction requirements

#### No plume

 Non-plume wet operation thanks to <u>dry finned coil</u>: it reduces humidity of discharge air from the prime surface coil.

#### Superb water saving

- Patented intelligent flow control system!
  With a 3-way valve for precise setting of outlet fluid temperature and unrivalled annual water-saving.
- Load profile-adaptable to dry, adiabatic or combined wet-dry operation.

#### **Cost-saving**

- Evaporative cooling PLUS unique combined heat transfer system for minimized system-wide energy consumption.
- Axial fan half the consumption of rivals and huge single cell capacity: saving you more!
- Less water usage = less water costs = less water treatment expenses

## Low maintenance and easy inspection

- Inspect and maintain safely HXI towers with unrivalled comfort, while standing inside.
- The HXI has a **spacious plenum** (internal area) and easy inspection/maintenance access.
- Access via large hinged door to internal walkway: no basin draining needed for unit interior inspection.
- Easy to inspect the **coil** during operation from the outside or from the inside via the **removable drift eliminator modules**.
- Easy to inspect the **fill** from the inside and via the **removable combined inlet shields** from the outside.
- The patented <u>BACross fill</u> sheets reduce fouling, allowing an easy inspection of the fill core without dismantling. Optional <u>BACross fill bundles</u> for quick and easy removal and cleaning of the fill.
- Self-cleaning cold water basin and fill above **sloped basin** to flush out dirt and debris.
- Removable suction strainer anti-vortex hood.
- Make-up, drain and overflow easily accessible from the outside for inspection and cleaning.

## Flexible operation

- **Multiple fan motor system** covers independent fan motor and drive assembly per fan with a plenum partition for independent fan operation. For extra capacity control or stand-by fan in case of fan failure.
- Various corrosion-resistant materials, including the unique <u>Baltibond<sup>®</sup> hybrid coating</u> for guaranteed long service life.
- Single-side air inlet and discharge, fits in most enclosures.
- Unique and patented heat transfer system: featuring combined flow via heat exchange coil and fill

pack, for fine temperature applications and thermal challenges.

• Patented intelligent flow control system!

### **Maximum operational safety**

- Easy-clean and easy-inspect HXI units reduce hygiene risks from bacteria or biofilm inside.
- **Combined inlet shields** block sunlight to prevent biological growth in the tower, filter the air and stop water splashing outside.
- The patented <u>BACross fill</u> reduces fouling.
- The **drift eliminators** certified by Eurovent, to prevent droplets escaping into the air.

Interested in the HXI hybrid closed circuit cooling tower for cooling your process fluid? Contact your local <u>BAC representative</u> for more information.
